DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-10 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 11/375,898. Although the conflicting claims are not identical, they are not patentably distinct from each other because although the copending claims present the method of the instant claims in a slightly different order, the methods are substantially similar and the reordering of the method steps does not distinguish them.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

The Examiner notes that copending Application 11/375,898 is a Divisional of the instant application. The claims in the copending application are not drawn towards a non-

elected invention as set forth in the previous action of the instant application, and therefore an obviousness-type double patenting rejection is appropriate.

Allowable Subject Matter

If a timely and proper Terminal Disclaimer were to be filed in response to the rejection as set forth above, then claims 1-10 would be allowable.

The following is a statement of reasons for the indication of allowable subject matter:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of obtaining multiple spatially heterodyned holograms including: Fourier analyzing spatially heterodyned holograms by shifting original origins of said hologram to sit on top of a spatial heterodyne carrier frequency defined by a reference beam-object beam angle at first and second respective angles wherein the first reference beam-object angle is not equal to the second reference beam-object angle and a single digital image includes both the first and second spatially-heterodyned holograms, in combination with the rest of the limitations of claim 1.
